

How to enable vba object model

To enable "Trust access to the VBA project object model" in Microsoft Excel, follow these steps:

1. Open Microsoft Excel.
2. Open any workbook.
3. Click on the **File** tab.
4. Select **Options**.
5. In the Excel Options window, choose **Trust Center** from the left pane.
6. Click on **Trust Center Settings...**
7. In the Trust Center window, select **Macro Settings**.
8. Check the box labeled **Trust access to the VBA project object model**.
9. Click **OK** to close the Trust Center, then **OK** again to close Excel Options.

This setting allows macros and add-ins to access the VBA project object model, which is necessary for certain macros to function properly ^[1] ^[2] ^[3] ^[4].

If the checkbox is greyed out, it may be due to group policy restrictions or administrative settings that prevent changing this option ^[5]. In that case, you might need to contact your system administrator.

Enabling this setting can pose a security risk if you run untrusted macros, so only enable it if you trust the source of your VBA code ^[6].
